

### **Why DesSoft?**

#### **DesSoft applications will deliver:**

- Cost savings in engineering document design of between 50 and 90%.
- Reduction of plant downtime due to up to date documentation.
- Full integration between P&ID, Electrical and Instrumentation.
- Auto generation of documentation directly from the database.
- Built-in report designer for reports and lists which updates as the project progresses.
- Progress report per project for the project manager to focus actions.
- Redlining of documents directly from SCADA.
- Instant access to design information.

#### **The following makes our design tool the most productive in the industry thus ensuring a competitive advantage.**

#### **Speed Tools:**

- Bulk Datasheets
- Bulk Loop Builder
- Bulk Document Builder for Loops and Panels
- Bus Device Association
- Cable Drum Allocation
- Multi cable allocation to racks (accurate cable length calculations)
- Apart from the normal table import tools, Bulk import for multiple tables Tools
- Bulk assignment of Manufacturer Standards for Motors, Instruments, Cables, etc. using drag-drop capabilities
- Bulk rebuild of Tstrip terminals, Cable cores, Tag numbers, etc.

1Des also has a spreadsheet view of all tables to do bulk update or viewing of information. These spreadsheet views also have multi column filtering methods as well as the capability to sort on any field by only clicking on the field's header or the field's name.
