Sleep Active Product Information

Sleep Active.co.za is a proudly South African company that manufactures Memory Foam™ and Latex Foam™ in climate controlled rooms.

Sleep Active and Comfort Clinic Fourways does extensive research on, not only the quality of our products, but also the importance sleep plays on the Suprachiasmatic nucleus, which regulates and controls hormones and other bodily functions imperative to the rejuvenation and healing processes of the human body.

Memory Foam™ responds and adjusts according to downward pressure and is temperature sensitive, cradling the body in its preferred and most natural sleeping position. Generally referred to as the "weightless environment" and is the most comfortable mattress you will ever sleep on.

Memory Foam™ and Latex Foam™ mattresses conform to the body shape and weight with zero upward pressure allowing for optimum pressure distribution, no more tossing and turning and also improved blood circulation.

Not all memory foam mattresses are equal. Beware of cheap imitations. The amount of Memory Foam™ and densities used in our products is used in accordance with the international norm and is recommended by leading professionals in the medical sector.

Sleep Active.co.za produces six beds in the range. All six beds have the same guarantees and warranties, the only difference is the comfort levels (firmness factors) of the beds, as all human bodies are different and need different comfort levels as our bodies are ageing.

The different layers of foams in the beds make up the different firmness range. Memory Foam on its own cannot support the weight of the human body and therefore the quality of the foam used to make up the "base" of the mattress plays a big role in the feel and durability of your memory foam products.

Medical Partners are welcome to send their patients to get sound sleep advice and also not to be "ripped off" in the current retail bedding industry.
