TITLE:

Go paperless! Go green!

SUMMARY:

Isn't it time to bring your office into the **paperless** 21st century with a green **online document storage system**?

BODY:

In this day-and-age, environmental issues are a top global priority. We are constantly hearing about the manifold dangers of climate change and it's long-term consequences. Recently the world came together in Durban, South Africa at COP17 for a series of climate change talks. It's clear that we all need to take action and start implementing changes that will help combat this global crisis.

But where can we start? Well, if you're reading this article in your office, take a look around. No doubt it's littered with sheets of paper, most of which are probably redundant. In fact, today's modern office is one of the major culprits in perpetrating ongoing climate change.

On average, an office uses a staggering 10, 000 sheets of paper a year. Try and picture what 10, 000 sheets of paper looks like when they're all stacked together. The environmental implications of this are much, much more enormous than the wall of paper that would create.

Added to that, one sheet of paper requires 1.5 cups of water to manufacture. So in a year an office is responsible for using 15 000 litres of water. Not to mention the fact that 10, 000 sheets is the equivalent of using 20% of a tree? Doesn't sound like that much, does it? But when you consider that the trees used in paper manufacturing are up to 13 meters tall trees, it starts adding up.

It makes sense then that companies need to start looking for **paperless office solutions**.

And the solution is easier than you think, in fact, it's right at your fingertips. Enter the future with **electronic document management** and **secure online document storage solutions**.

Many companies are now offering various **document management systems**, which gives your company the benefits of **secure online document storage**. Not only does a system like this offer **affordable document storage solutions**, but it also promises an instant reduction in your company's carbon footprint.

And your documents will always remain safe, stored on a viable storage solution, such as cloud solutions. This easy and convenient **off-site data storage** solution is becoming more and more popular with businesses around the world, and it's easy to see why.

Not only will you be saving time, with features like **online document indexing**, which allows for quick and easy **document retrieval**, but you'll also be saving money on printing and paper, whilst preserving our planet's precious resources for future generations.

KEYWORDS USED:

- Paperless
- online document storage system
- document retrieval
- online document indexing,
- off-site data storage
- affordable document storage solutions,
- secure online document storage.
- document management systems,
- electronic document management
- secure online document storage solutions.

Keyword Field: (Suggested keywords)

Paperless, online document storage system, document management systems, off-site data storage.
