### Intelligent Solar Heating

## SunScan SunSeeker range

This is SunScans evacuated tube collector range.

We currently have 4 evacuated tube systems on the rebate program.

Below is a brief description of all the components that make up these systems. All the components have been carefully selected from suppliers from all over the world including the best locally available components in order to make sure we provide our clients with a combination of high quality top performing reliable systems.

1. 150L full system with a 15 tube collector, 150L Duratherm geyser, circulating pump, electronic controller, thermostatic mixing valve, one way valve, a steam release valve and 2 gate valves to make servicing of pump easy . This system is suitable for a family of up to 3 people.
2. 200L full system which comes with all the same components except it has a 20 tube collector and a 200L Duratherm Geyser. This system is suitable for a family of up to 4 people.
3. 150L retro fit system which is retro fitted to an existing 150L Kwikot geyser which is less than 5 years old. The system comes with all the same components as the 150L full except you get a retro fit flange in place of the new geyser. This system is suitable of a family of up to 3 people.
4. 200L retro fit system which is the same as the 200L full except you get a retro fit flange in place of a new geyser and is suitable for 4 people.

We can offer a 300 and 400L pumped systems please enquire about rebates on these. This covers all the evacuated tube pumped systems we currently offer on the rebate program. We can also put multiple systems in one home and the owner will qualify for rebates on all of the systems.
