

Innovative Technologies

# Seamless Integration

## About us

We are a team of Innovation Technologists, providing services encompassing the design, development and manufacture of electronic devices to various industries throughout the world. We are here to improve and simplify your world. By using cutting-edge technology and the latest, most innovative techniques, we are able to develop new and improve existing products in very short time span, creating reliable, robust solutions to meet your needs. Whether you have a new electronic product that needs to be developed or you have a complex wiring problem, Inotech can engineer a solution for you.

## Our Promise

We are committed to serving you, our client, from first consultation to final product supply. Our philosophy is to design products of the highest quality that are electronically sound, tough and simple to operate. This philosophy helps us to provide products that integrate seamlessly and easily into your existing infrastructure and processes. Our products are fully customized and centered around your needs so that they may best suit your application.

## Our Infrastructure

Our offices are based in Wilbart in Germiston, we are conveniently located close to some of the largest industrial areas within Johannesburg. We have a skilled team of people who are equipped with the latest skills and most up-to date tools, enabling us to produce products quickly and effectively that stand the test of time.

## Our Customers

Our ever growing customer list allows us to be associated as a supplier and partner to a number of high profile customers including OEMs, end users and agents. Please contact us for references.

Customized Solutions

# Latest Technology

## Our Products

We work hand in hand with our clients, providing suitable, custom solutions to both simple and complex problems. Over time, we have also built up a range of existing products which are available off the shelf including the following:

- Low cost power supplies
- Large Scale Uninterruptable power supplies
- Motor monitoring systems which are able to detect impending failures early
- Refrigeration monitoring systems
- Various microprocessor & PLC-based systems for motor control and production control

## Speciality technologies

Customised development encompassing technologies such as:

- LAN-Based communication
- Wireless Radio frequency Communication
- GSM Linkups and technologies
- Centralised data storage and report generation
- Remote maintenance & firmware updates
- Software interface development for integration of our products

## Our BEE

From the onset, our BEE commitment was decided on and is an integral part of our philosophy. Management, employment equity, skills development, preferential procurement are fundamental for in keeping this commitment. We Believe that BEE is necessary for the future prosperity of the South African economy. Currently we are Level 4 BEE Contributor.
