

Purevoice

- Hosted switchboard - iPBX • Fixed telephone lines • Internet access
- Internet data hosting • Phone costing consulting • Equipment • Support

Phones for the future at half price!

Voice Solution

PureVoice's system for voice communications provides remarkable cost savings for all sizes of organisations. Our voice system is a high-quality cost server for all fixed-line call types. Those include on-net calls, inter-branch calls, local calls, national calls, international calls and fixed-to-mobile (F2M) calls.

Hosted switchboard

Whatever the size of your organisation, your needs can be accommodated. Even multiple branches are able to connect to PureVoice's single, cloud-based PBX. It's the ultimate answer, since all you pay is a monthly rental per extension which covers handsets, installation, maintenance, support and all future moves, additions or changes, making it half the cost of a conventional switchboard. You'll have a system that's both flexible to your business, and truly future-proof. While PureVoice's hosted switchboard solution provides all the functionality of a conventional switchboard, you'll find the benefits far in excess with great features such as:

- Voice mail
- Call forwarding to mobile
- Call recording
- Conference calls
- Advert on-hold
- FREE inter-branch calls
- Import contacts from outlook/mobile
- Do not disturb
- Music on-hold
- Convert iPhone/iPad/Android into your extension
