

# Intelligent facts about Davo Broadband

BUSINESS INTELLIGENCE

## Symmetrical

When symmetrical, all devices can transmit and receive data at equal rates. The symmetric network design affords all devices equal access to resources.

## Local Infrastructure

Davo is part of a trusted company that is established since 1988. Davo is administered and housed in Bloemfontein with an internationally recognised internal billing system to ensure rapid service and customer satisfaction. With our local infrastructure in place, concerns can be identified immediately and resolved quickly.

## Unshaped Broadband

Unlike shaped broadband, where certain online activities receive low priority when the network is busy, our unshaped broadband will treat all procedures the same and offers optimal internet access for all online activity.

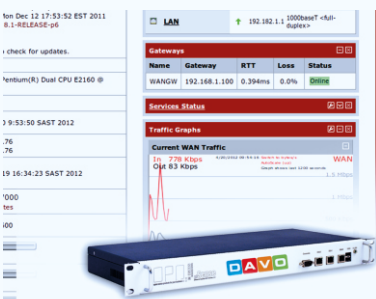

## High-speed Broadband

Our intelligent capacity planning, sophisticated real-time monitoring and management tools provide efficient, reliable and stable broadband performance with a speed of up to 4MB per second (4096KB per second). Our infrastructure in place is capable to carry up to 1 gig per second traffic in the future.

## Stable Wireless Connection

Davo is a stable wireless connection with quick and easy installation. With our own towers we provide last mile service at a high frequency making the service reliable and efficient.

## Customer Protection

Due to cybercrime and auto downloads, as well as staff misuse, Davo will, with your demand, install a proxy server that will control applications such as social media, pornography or game sites ensuring true business broadband usage and productivity.
