

Company Profile

Serbco Western Province is a dynamic South African company operating in the piping systems sector of the market, since 2009. We bring to market a range of innovative, high quality yet **very** cost-effective piping solutions. All products conform to the highest European and South African specifications and certifications possible, and have been developed in ISO 9001 accredited factories, with environmental concerns as a major design consideration. Although multi-layer PP-r pipes are manufactured, this range is not available from our distributors due to the adverse effect of aluminium on the environment and also the non-recyclability of multi-layer pipes. We have exported our products in to Africa and around the globe. We are quickly busy establishing a reputation for efficiently supplying highly competitive priced piping solutions to projects around the country. We have established a nationwide network of distributors with local stockholding, supported by a national warehouse and logistics centre in Johannesburg.

Serbco promotes a range of **PolyPropylene Random Co-Polymer (PP-r)** pipes and fittings from 20mm to 160mm and in pressure classes from 10 to 25 bar. The pipe system has been specifically designed to enable the flow of clean hot and cold potable water, completely replacing the use of galvanized and copper pipe as poor or aggressive water conditions are on the increase. Moreover PP-r (Polypropylene Random Co-Polymer) has very successfully been used in compressed air, irrigation, vacuum, food processing, sea water, high abrasion and various chemical applications. It is also commonly used for radiator, under-floor heating and cooling systems, as well as being highly popular in the transport industry due to the joints' extreme resistance to vibration. The pipe system is manufactured from PP-Random type III raw material from Borealis, a global supplier to the plastics industry. It meets and exceeds the German and European health standards. Serbco PP-r has completed and passed SABS testing to SANS ISO 15874 and is now SABS approved, as well as being JASWIC accepted. Clients are encouraged to visit the company's website at www.serbco-wp.co.za.

Serbco WP is a proud member of both the Polymer Hot and Cold Technology association (PHACT). We are service driven and strive to not only create substantial savings to customers but also make a positive contribution to the environment by making role players aware of the environmental advantages of the product and their contribution by specifying the product. We will assist with design and consult with contractors on site with correct installation procedures in addition to providing training to all staff, free of charge.

The following Cape Town based plumbing companies are some who has used PP-r at the venues indicated next to their names and are in favour of using PP-r:

- Peninsula Plumbing - Coral Hotel
- Stewco(Best Plumbing) - TAJ Palace/Promenade Shopping Mall/Green Offices Century City
- RMI Plumbing - Athlone Stadium /Khayelitsha Hospital
- Modern Plumbing - Cape Provincial Univ. of Technology/Mitchells Plein District Hospital
- Juro Piping - Groote Schuur Hospital Interfloor C & D
- Waterloo Plumbing - Groote Schuur Hospital/Hermanus Hospital

Current and recently completed projects include:

- ✓ Kenako Golf Academy – George
- ✓ Residential projects – Oubaai, Ebotse, Serengheti, Kingswood, etc.
