Pest Control

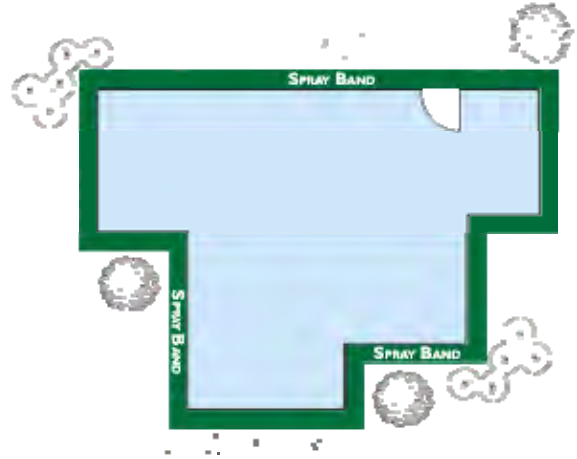

Perimeter Pest Control

Pests find a way to get onto your property and into the buildings of your home or business. Perimeter Pest Control is a series of insect control treatments which provide a shield on the perimeter of your property and around the building, reducing the number of insect invaders that may go unnoticed from entering your space.

We administer an insect control band to the property perimeter and the building foundation walls, cracks, and crevices to help keep various insects out.

Our advanced perimeter pest program consists of four treatments. The first treatment is in Spring before the buggers invade your home. Two more treatments are scheduled for the Summer months and the final treatment is completed in winter offering year round protection to your property.

What are the benefits of our Perimeter Pest Control program?

- Keep unwanted pests from invading your home or business
- It is odourless, colourless, and friendly to your family and pets
- It is not harmful to soil, flowers, shrubs, or lawns
- It is effective against many different insects that invade your home
- It takes place outdoors keeping insecticides out of your home and out of your living space
- Scheduling can be done at your garden maintenance programs

Our Advanced Perimeter Pest Control Program

- We provide 4 applications, beginning in the spring.
- We apply an insecticide spray barrier strip around the entire home.
- We give special attention to cracks and small openings
- Each outside door threshold is given attention to stop insect entry.
- Foundation vents and window sills are common entry points for insect pests and are carefully treated.
