

Why out source

1. Reduce and control operating costs.

When you outsource, you eliminate the costs associated with hiring an employee, such as management oversight, training, health insurance, employment taxes, retirement plans etc.

2. Improve company focus. It is neither practical, nor possible to be a jack of all trades. Outsourcing lets you focus on your core competencies while another company focuses on theirs.

3. Gain access to exceptional capabilities. Your return on investment is so much greater when you outsource information technology to a firm that specializes in the areas you need. Instead of just the knowledge of one person, you benefit from the collective experience of a team of IT professionals.

4. Free internal resources for other purposes

Outsourcing allows you to retain employees for their highest and best use, rather than wasting their time on things that may take them longer than someone who is trained in these specific areas.

5. Resources are not available internally. On the flip side, maybe you don't have anyone in your company who can manage your IT needs, and hiring a new employee is not in the budget. Outsourcing can be a feasible alternative, both for the interim and for the long-term.

6. Function difficult to manage or out of control. This is definitely a scenario when outsourcing to experts can make a big difference.

7. Make capital funds available. By outsourcing non-core business functions, you can spend your capital funds on items that are directly related to your product or your customers.

8. Reduce Risk. Keeping up with technology required to run your business is expensive and time consuming. Because professional outsourced IT providers work with multiple clients and need to keep up on industry best practices, they typically know what is right and what is not. This kind of knowledge and experience dramatically reduces your risk of

Cloud computing

In this modern world of Technology data has become a company's most valuable asset. Data may be stored in house in the servers. The major question is what happens if unforeseen circumstances destroy the servers e.g. fire, earthquakes or any other hazard? This would mean the company has lost its valuable asset with no chance of getting it back.

Cloud computing is the storage of data in the cloud or in layman's language in the air. In case of any form of disaster data is not affected and you can have your data back within 15 mins.

It is always safe to keep your data this way. Eyethu Holdings offers you cloud computing at a more efficient way. All you need is a desktop short cut to access your data.

OUT SOURCED INFORMATION
TECHNOLOGY

Eyethu Technologies Pty Ltd

As the owner of a small company, you have probably entertained the thought of outsourcing some aspect of your business. The benefits of outsourcing seem obvious, touted by experts across numerous industries as the answer to cutting costs for business functions ranging from information technology to accounting, marketing and human resources; it seems possible that you could run an entire company without ever hiring a single employee.

Eyethu Technologies is a professional outsourced Information Technology service company serving small businesses in South Africa. Our specialties are network planning, Software development, and ongoing network/computer maintenance. We pride ourselves on not only delivering the results you expect, but also being knowledgeable, systematic, accountable, trustworthy and easy to work with.

Hardware maintenance

Eyethu Support Pack Hardware and Eyethu ServiceContract Hardware encompass the diagnosis and the elimination of hardware faults by repair or replacement. Eyethu will respond to an incident and solve the fault in accordance with the contracted Service Level Agreement which can be an Offsite or Onsite service.

Eyethu Service Contract can, unless otherwise explicitly regulated, be acquired at any time during the product lifecycle until 12 months before the end-of-service for that product. It offers more flexibility than a Support Pack allowing service levels to be agreed in accordance with customer's needs.

Networking solutions

We design network topologies, do all set up, maintenance and we offer the entire array of WAN/LAN/MAN Solutions & Products incorporating the latest technologies from global pioneers. The network is secured from hackers and unauthorized people.

We connect you.....

Biometric solutions

Biometrics are the person is to the key so you need never remember your card or key. Biometrics uses your unique identity to enable to unlock,

Why not secure your business?

- increase security- provide a convenient and low cost additional level of security
- reduce password administration costs

Software development

Our company develops customized software systems that suit your business.

Our idea is to simplify the operation of your business to make sure you yield more results by letting the system do much of your work.

Eyethu also offers a package that allows business to rent the system instead of outright purchase because we understand the cost of ownership and thus willing to go an extra mile to assist our customers.

Installation and support services also come within the package.

Our idea is to provide the best solutions, grow our competence and keep sharpening customers to ensure we add value to our relationships, develop customer focused and cost-effective business solutions for different individual needs.

Eyethu Holdings provide and actively pursue innovative technologies and new business opportunities that enable businesses to make an effective transition to true e-business environments. Faced with increased globalization, mergers and acquisitions, and the need to stay "one step ahead" of the competition, the value of standards-based service-oriented solutions has never been greater.

Our goal is to deliver technology solutions offering lasting strategic value to your enterprise. Our team in conjunction with the right partners works to ensure that the solution is deployed with the right products, future-proofed with the right architecture, and implemented with our best practices. We manage the projects through the full life cycle, ensuring that they meet required service levels and provide headroom for future growth once they enter production.
