

JOHANNAUDE

ARCHITECHNOLOGY

the ART and SCIENCE of building

MISSION AND PHILOSOPHY

With architecture as our core professional business, our mission and design philosophy focuses on the unique needs of the client.

Our clients are encouraged to use our expertise and experience to design their ideal building, or make alterations to an existing building. While we are proud of our unique sense of innovation, we do not indulge in experimental, extreme or trend-setting architecture at the expense of our client.

Rather, we aim to pair the client's vision with our professional guidance and creative suggestions so that the end result is a building that is fully functional, budget-friendly, energy efficient and fulfilling of the client's expectations and suitable to their lifestyle or core business, while never negotiating on architectural-, scientific and aesthetic excellence.

VALUES

We shall never negotiate on architectural-, engineering, scientific and aesthetic excellence.

BUSINESS GOALS & OBJECTIVES

We strongly support socio-economic upliftment and sustainable growth by incorporating energy efficient building solutions, ecologically sustainable development and responsible use and re-use of natural resources.

SERVICE PLEDGE

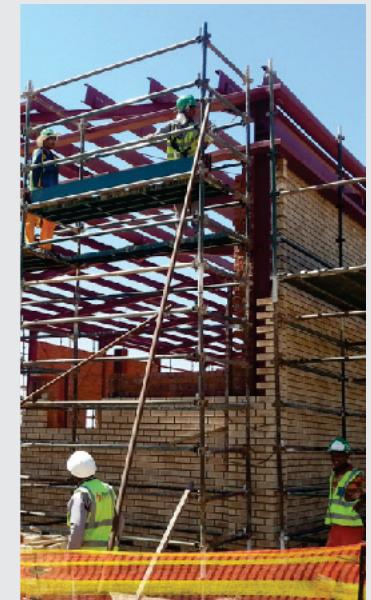

We shall practice with integrity and fair dealing, tolerance and respect. We value and uphold the standards and dignity of our profession, conscious of the fact that our skills carry an obligation to serve humanity with great responsibility. We shall only participate in honest enterprises, and when needed, we shall avail our skills and expertise without reservation.

BUSINESS STRATEGY

The practice consists of a small permanent staff contingent and employs draughtsmen, architects and technicians as the need arises. With our vast network of professionals in other spheres within the built environment, we can put together a professional team with unsurpassed experience and expertise, to design and manage any building project, no matter how big or small – we do them all.

OUR SERVICES

This practice provides the full spectrum of professional architectural services as defined by the South African Council for the Architectural profession, from inception, conceptualisation, plan approval, working drawings, specifications, tender documentation, JBCC contract administration to final completion certification and handing over the keys. Although civil- and structural engineering is not our core business, the service is available to our clients as an additional service. We fully appreciate the ART and the SCIENCE of building, enabling us to understand the anatomy of buildings and provide forensic architectural services.
