SMARTLOK

THE FUTURE IS SMART

no key. no problem.

APPLICATIONS IN MINING

Our Locking Solutions can be newly installed, or retro fitted without costly and labour intensive wiring.

With all your locks and door controllers connected, sharing data in real-time, sending you updates and keeping valuable assets secure and ensuring safety, imagine what's possible.

Applications:

- Securing explosives and providing real time data and detailed audit trails
- High value tooling stores
- Transportation of valuable minerals such as diamond canisters
- Lockout of high voltage electrical Distribution boards for maintenance purposes, ensuring Safety
- Providing access control to high risk areas
- Securing of manholes covers in and around the mine
- Securing of fuels

Mining Sectors

- Gold
- PGM (Platinum Group Metals)
- Coal
- Ferrous and Non-Ferrous metals
- Diamond

Shackle Features:

Removable

Heavy-duty

Available in a variety of sizes

A Shroud provides added protection against:

Lock visibility that leads to increased unauthorized entry

Common lock tampering that occurs with bolt cutters, hacksaw, etc.

NO ONE GETS PAST THE BLOCK

NOKĒ LOCK BLOCK

The Nokē Lock Block is a heavy-duty, steel casing used in conjunction with the HD Smart Padlock to provide an extreme-security, tamper-resistant, keyless locking system

DIVIDE AND CONQUER

The simple two part design allows for use on a range of both standard and double doors such as: trucks, shipping containers, trailers, man doors, gates, and beyond

HERE'S HOW IT'S USED:

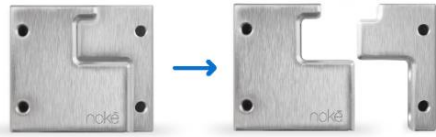

UNLOCKED POSITION

One side of the Lock Block attaches to the door. The other side attaches to the adjacent door frame or wall.

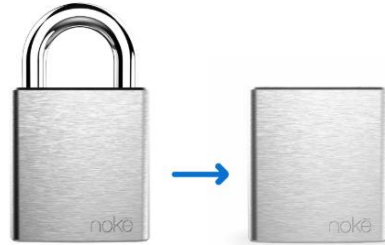

LOCKED POSITION

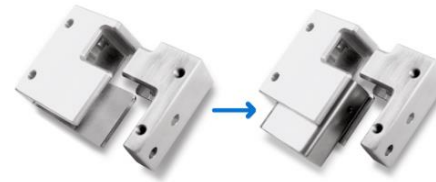

When the door is closed, the two sides of the Lock Block come together to create a solid steel casing that encloses the HD Smart Padlock.

1: OPEN THE LOCK BLOCK
Begin by separating the two sides of the Lock Block

2: REMOVE SHACKLE FROM HD
Follow steps to remove shackle from HD Padlock, lock body

3: INSERT HD INTO LOCK BLOCK
With Lock Block open, align interlocking shackle and insert lock body

4: CLOSE LOCK BLOCK
Close side of block to encase lock body

THE BRAINS INSIDE THE BOX

Lock Block users receive all the intelligence of the Nokē smart-platform and mobile app, encased in the most secure locking mechanism available.

THE BENEFITS INCLUDE:

- Desktop Portal
- Mobile App
- API Integration
- Cloud-Based
- Data Security

ATEX Certification Our locks are ATEX Zone 1

- **ATEX Certification** is a **certification** of equipment intended for use in potentially explosive atmospheres in the European Union. Equipment intended for use in potentially explosive atmospheres in the United States must have the specific mark of one of the NRTLs recognized to test and **certify** this type of equipment.

WALK INTO YOUR **CONNECTED SECURITY PLATFORM**

Nokē door controllers are engineered with the intelligence to eliminate access control complexities, modernize physical security, get all your locks connected, on-line, and working together seamlessly.

BLUETOOTH

Control all locks from any Bluetooth enabled smart device

API INTEGRATION

Integrates with existing platforms to avoid multiple platforms and redundancy

CLOUD-BASED

Locks, keys, app, and web portal synchronized in real-time through Nokē cloud

MESH NETWORKING TECHNOLOGY

Allows for two-way communication between the lock and the cloud

NOKĒ MOBILE APP

Control your locks from a simple smartphone app

NOKĒ WEB PORTAL

Manage users, locks, digital keys, and receive comprehensive reporting on user activity

SECURE DATA

Products are built with the highest level data security, compliance, and privacy standards

REMOTE ACCESS

Control who, when, and where locks are being used, from anywhere in the world

SEE THE BIG PICTURE FROM HERE

NOKĒ WEB PORTAL

The Nokē web portal is accessed from your desktop computer and allows you to view and control where, when, and by whom locks are being used from anywhere in the world.
