

Compost Turners & Spreaders

Benefits of using a Compost Turner

- is tractor mounted
- used to create aerobic compost high in microbial and fungal content which rebuilds soils, restores carbon and organic matter, and improves erosion control.
- reduces disease and insect pressure
- enhances water infiltration
- reduces compaction
- improves nutrient retention
- promotes healthier plants because it reduces the need for chemicals
- costs for fertilizer will be dramatically cut

Benefits of using a Compost Spreader

- huge labour saving as machine places organic material under trees
- can move and place compost, mulch, wood chips, chalk, lime, and manure
- makes use of roller chain conveyors all round, so conveyor belt free
- can do band placing underneath trees, as well as full surface broadcast spreading
- clip in cross bars between chains
- available from 4m² to 9m²
- easy to calibrate
- very rugged design
- locally manufactured
- fully hydraulic
